DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Koene et al.,

Asymmetric Triaryldiamines as Thermally Stable Hole Transporting Layers for Organic Light-Emitting Devices, Chemical Materials, 1988, 10, 2235-2250.

The reference discloses organic light emitting devices that consists of an indium tin oxide anode, a tertiary amine hole transporting layer, an aluminum coordination complex electron transport layer and a Mg-Ag cathode (see page 2235, column 1). In column 1 of page 2237 of the reference, it is disclosed that the tertiary amines for the hole-transporting layer are asymmetric in that they have three different aryl groups bound to each nitrogen atom. The reference discloses a tertiary amine with the structure

wherein each of the aryl groups is different as per the instant claims.

3. Claims 1-2 and 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Satou et al., U.S. Pre Grant Publication 2003/0082400.

Satou discloses a thin film electroluminescent device wherein the luminescent layer comprises a charge transport luminescent materials such as

wherein Ar1 and Ar2 can be different and each independently represents a substituted or unsubstituted aryl group; Ar3 represents a substituted or unsubstituted arylene group; X represents a substituent containing two or more carbon rings and Y represents a substituted or unsubstituted aryl group containing five or more conjugated bonds.
